

Aluminium Composite Panel

Aluminium Composite Panel (ACP) is a widely-used cladding material known for its durability, light weight, and high aesthetic appeal.

It consists of two thin layers of aluminium enclosing a non-aluminium core, making it strong and ideal for modern architectural applications.

Key Features:

1. Lightweight yet sturdy construction
2. Resistant to weather, UV rays, and corrosion
3. Easy to install and maintain
4. Available in various colors, textures, and finishes

Applications:

- Exterior and interior cladding for buildings
- Signage and advertising boards
- Partitions and false ceilings
- Furniture and interior designs
